Gates Financing Of Imperial College London, And Their Modelling

HAVE EQUAL VALUE
we are impatient optimists working to reduce inequity

Epidemiologist Neil Ferguson has (justifiably) taken a lot of criticism for his doomsday computer modelling of how the coronavirus “planned-emic” was supposed to play out.

Considering Ferguson’s laughable failures in other predictions before, people are wondering why anyone still takes this man seriously. That is a fair question to ask.

But consider an alternate theory. Let’s suppose these doomsday scenarios were cooked up on purpose. Perhaps this modelling ***INTENTIONALLY*** led to overhyped conclusions and estimates. It wasn’t incompetence, but deliberate.

Why would someone do this? To answer this, think about where Imperial College London gets a good amount of its financing from. There are many vested interests who would stand to make a fortune if countries around the world were desperate for a vaccine. In this scenario, Ferguson’s modelling should not be taken as research, but as a calculated effort at propaganda.

Disclaimer: I don’t have any hard evidence to support such a theory. However, it is interesting that Ferguson’s work is financed by people who would greatly benefit from him reaching a doomsday conclusion. It’s reasonable to assume he would become more cautious after his repeated failure, but he hasn’t.

Gates Grants To Imperial College London

This chart was compiled from information posted on the Bill & Melinda Gates Foundation website. The following grants are just those provided to Imperial College London. Note: it seems that computer modelling is just one small part of what they do.

DATE	AMOUNT	PURPOSE
June 2002	$31,928,231	Schistosomiasis Control
July 2002	$30,000,000	HIV Prevention

Yes, the Gates Foundation directly finances a lot of the computer modelling that Imperial College London is involved with. Some $16 million or so directly granted for these computer models.

But do these doomsday models actually work? Are they supposed to? Perhaps not. After all, if they predicted that there weren't deadly pandemic, then there would be no need to develop a vaccine.

GAVI Funded By Gates Foundation

Gavi
OUR ALLIANCE
The Bill & Melinda Gates Foundation
Gates Foundation pledged US$ 750 million to set up Gavi in 1999.
The Foundation is a key Gavi partner in vaccine market shaping.

This is probably the most well known link in the chain. The Bill and Melinda Gates Foundation helped found GAVI, the Global Vaccine Alliance in 1999, and has made regular contributions to it. The foundation essentially runs the show.

The Global Vaccine Alliance, as the name suggests, is an organization devoted to pushing vaccinations on the public all across the world. Bill Gates has long been a proponent of mass vaccinations.

One of (but certainly not the only) lobbyist for the vaccine agenda is a firm called Crestview Strategy. They lobbied the Federal Government on behalf of GAVI, on 20 separate occasions. See Part 4 in the series.

This was covered in Part 18 of the series. Vaccine bonds are now a real thing, and GAVI is involved in running the operation. Of course, the bonds market would completely dry up if there weren't a pandemic to deal with. Pretty convenient.

It's pretty well known at this point that the World Health Organization and Center for Disease Control in the U.S. both are heavily funded by the Bill & Melinda Gates Foundation. Consequently, they toe the line that coronavirus is a deadly pandemic, and that vaccines are necessary.

Draft Four - 2 April 2020
Immunization is a global health and development success story, saving millions of lives every year. We now have vaccines to prevent more than 20 life-threatening diseases, helping people of all ages live longer, healthier lives. Immunization is the foundation of the primary health care system and an indisputable human right. It's also one of the best health investments money can buy. Yet despite tremendous progress, far too many people around the world – including nearly 20 million infants each year – have insufficient access to vaccines. In some countries, progress has stalled or even reversed, and there is a real risk that complacency will undermine

We need to get digital ID right
Identity is vital for political, economic, and social opportunity. But systems of identification are archaic, insecure, lack adequate privacy protection, and for over a billion people, inaccessible. Digital identity is being defined now — and we need to get it right.

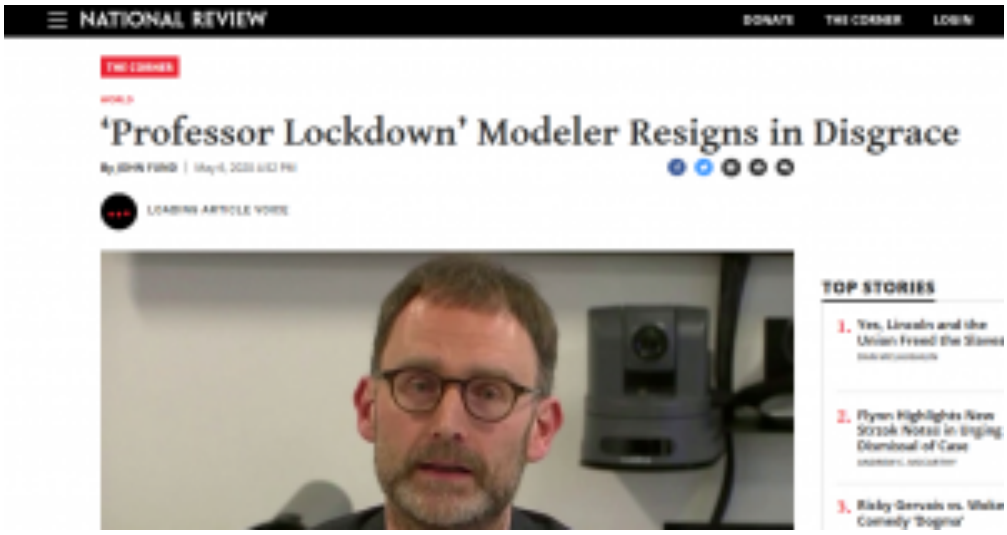
This was addressed in Part 3. The Bill & Melinda Gates Foundation is heavily involved in both ID2020 and Immunization Agenda 2030. The Foundation also supports some version of a “vaccine certification” which would be needed to go about life in the new normal.

Of course, advancing these agendas depends on there being a pandemic (or perceived pandemic). Good thing Ferguson was so completely off in his computer modelling. Make no mistake, it’s not only helpful that the death rates be inflated, but essential that they are.

Models Supposed To Be Wrong?



> Ferguson was behind the disputed research that sparked the ***mass culling of eleven million sheep and cattle during the 2001 outbreak of foot-and-mouth disease***.

> Charlotte Reid, a farmer's neighbor, recalls: "I remember that appalling time. Sheep were left starving in fields near us. Then came the open air slaughter. The poor animals were panic stricken. It was one of the worst things I've witnessed. ***And all based on a model — if's but's and maybe's."***

> In 2002, Ferguson predicted that, by 2080, ***up to 150,000 people could die from exposure to BSE (mad cow disease) in beef. In the U.K., there were only 177 deaths from BSE.***

> In 2005, Ferguson predicted that up to ***150 million people could be killed from bird flu***. In the end, ***only 282 people died worldwide*** from the disease between 2003 and 2009.

> In 2009, a government estimate, based on Ferguson's advice, said a "reasonable worst-case scenario" was that the swine flu would lead to ***65,000 British deaths***. In the end, ***swine flu killed 457 people*** in the U.K.

> Last March, Ferguson admitted that his Imperial College model of the COVID-19 disease was based on undocumented, 13-year-old computer code that was intended to be used for a feared influenza pandemic, rather than a coronavirus. Ferguson declined to release his original code so other scientists could check his results. ***He only released a heavily revised set of code last week, after a six-week delay.***

Could it be that Ferguson is truly incompetent, and has no clue what he is doing? Or, are his predictions exaggerated on purpose? There's no reason to take him or his models seriously, yet governments still do.

While this all sounds like an absurd conspiracy theory, consider what else is going on. Would there be a growing vaccine bonds industry without this so-called pandemic? Would it be easy to get the public on board with implanting a vaccine certificate, or pushing Immunization 2030? How else could one get the public on board with making mask wearing seem normal?

It is possible that there is nothing malevolent here, and that Ferguson is just a serial screwup. But it's undeniable that these screwups help advance other parts of the agenda.

Nothing is as it seems.

Question everything.
